

IN THE CLAIMS

H 1
Claims 1-17. (Canceled)

18. (Currently Amended) A ~~recording apparatus~~ recording/reproducing system comprising:
an extractor operable to extract a program clock reference from a received transport stream;
a clock generator operable to generate an external clock signal synchronized with said program clock reference;
a time-stamp generator operable to generate an arrival time stamp corresponding to a time of receipt of a transport packet in synchronization with said external clock signal;
a formatting unit operable to add said arrival time stamp to the transport packet;
and
an information generator operable to generate information representative of a transport packet corresponding to discontinuity of the added arrival time stamps in the transport stream;
wherein when said arrival time stamp is discontinuous, output timing of the transport packet is controlled in accordance with the discontinuity information.

Claims 19-21. (Canceled)

#1
Con't

22. (Currently Amended) A ~~recording apparatus~~ recording/reproducing system comprising:

a time-stamp generator operable to generate a sequential time stamp corresponding to a time of receipt in response to an external clock;

a formatting unit operable to add said time stamp indicating arrival time of each transport packet to the transport packet;

an information generator operable to generate information indicative of positional information of the transport packet corresponding to discontinuity of the added time stamps; and

a recording unit operable to record said positional information along with the input transport packet;

wherein when said time stamp is discontinuous, output timing of the transport packet is controlled in accordance with the discontinuity information.

23. (Currently Amended) The ~~recording apparatus~~ recording/reproducing system according to claim 22,

wherein a recording control circuit stores a playback management file of an original playback path corresponding to a transport stream in a storage media unit.

24. (Currently Amended) The ~~recording apparatus~~ recording/reproducing system according to claim 23,

wherein said playback management file includes file names, times and addresses of an edited playback path and locations or points of time at each of which discontinuity of time stamps is generated.

Claim 25. (Canceled)

26. (Currently Amended) A ~~recording apparatus~~ recording/reproducing system comprising:

- a time-stamp generator operable to generate an arrival time stamp corresponding to a time of receipt indicative of arrival time of a received transport packet in synchronization with an external clock signal;
- a formatting unit operable to add said arrival time stamp to the received transport packet; and
- an information generator operable to generate information indicating a discontinuity of the generated arrival time stamp in the transport stream;

wherein when said arrival time stamp is discontinuous, output timing of the transport packet is controlled in accordance with the discontinuity information.

27. (Currently Amended) The ~~recording apparatus~~ recording/reproducing system according to claim 26,

wherein a recording control circuit stores a playback management file of an original playback path corresponding to a transport stream in a storage media unit.

28. (Currently Amended) The ~~recording apparatus~~ recording/reproducing system
according to claim 27,

wherein said playback management file includes file names, times and addresses
of an edited playback path and locations or points of time at each of which discontinuity of time
stamps is generated.

Claim 29. (Canceled)

30. (Currently Amended) A method for ~~recording~~ recording/reproducing,
comprising the steps of:

extracting a program clock reference from a received transport stream;

generating an external clock signal synchronized with said program clock
reference;

generating an arrival time stamp corresponding to a time of receipt of a transport
packet in synchronization with said external clock signal;

formatting to add said arrival time stamp to the transport packet;

generating information representative of a transport packet corresponding to
discontinuity of the added arrival time stamps in the transport stream; and

controlling when said arrival time stamp is discontinuous, output timing of the
transport packet in accordance with the discontinuity information.

31. (Currently Amended) *Hi* *com* ~~[[A]]~~ The method according to claim 30,
wherein a recording control circuit stores a playback management file of an
original playback path corresponding to a transport stream in a storage media unit.

32. (Currently Amended) ~~[[A]]~~ The method according to claim 31,
wherein said playback management file includes file names, times and addresses
of an edited playback path and locations or points of time at each of which discontinuity of time
stamps is generated.

33. (Canceled)

34. (Currently Amended) A method for ~~recording~~ recording/reproducing,
comprising the steps of:
generating a sequential time stamp corresponding to a time of receipt in response
to an external clock;
formatting to add said time stamp indicating arrival time of each transport packet
to the transport packet;
generating information indicative of positional information of the transport packet
corresponding to discontinuity of the added time stamps; and
recording said positional information along with the input transport packet;
controlling when said time stamp is discontinuous, output timing of the transport
packet in accordance with the discontinuity information.

Cm

35. (Currently Amended) [[A]] The method according to claim 34,
wherein a recording control circuit stores a playback management file of an
original playback path corresponding to a transport stream in a storage media unit.

36. (Currently Amended) [[A]] The method according to claim 35,
wherein said playback management file includes file names, times and addresses
of an edited playback path and locations or points of time at each of which discontinuity of time
stamps is generated.

Claim 37. (Canceled)

38. (Currently Amended) A method for ~~recording~~ recording/reproducing,
comprising the steps of:
generating an arrival time stamp indicative of an arrival time corresponding to a
time of receipt of a received transport packet in synchronization with an external clock signal;
formatting to add said arrival time stamp to the received transport packet; and
generating information indicating a discontinuity of the generated arrival time
stamp in the transport stream; and
controlling when said arrival time stamp is discontinuous, output timing of the
transport packet in accordance with the discontinuity information.

CMT

39. (Currently Amended) [[A]] The method according to claim 38,
wherein a recording control circuit stores a playback management file of an
original playback path corresponding to a transport stream in a storage media unit.

40. (Currently Amended) [[A]] The method according to claim 39,
wherein said playback management file includes file names, times and addresses
of an edited playback path and locations or points of time at each of which discontinuity of time
stamps is generated.

Claim 41-43. (Canceled)

44. (Currently Amended) A ~~recording~~ recording/reproducing medium for
H1
Cmcd ~~recording~~ recording/reproducing a plurality of data streams, said plurality of data streams being
~~recorded~~ recorded/reproduced in accordance with the steps of:

extracting a program clock reference from a received transport stream;

generating an external clock signal synchronized with said program clock
reference;

generating an arrival time stamp corresponding to a time of receipt of a transport
packet in synchronization with said external clock signal;

formatting to add said arrival time stamp to the transport packet;

generating information representative of a transport packet corresponding to
discontinuity of the added arrival time stamps in the transport stream; and

storing said information representative of said transport packet corresponding to
said discontinuity of the added arrival time stamps in the transport stream.
